# THE PROCESS

I went through the process of website design by learning to code and using an existing template to create a customized website that showcases my work and personal details. In designing my website, I took into consideration factors such as user experience, visual appeal, and functionality. By altering the code and CSS of the template, I was able to personalize the design and create a unique look for my website.

Furthermore, adding my own icons, photos, and descriptions helped to create a cohesive and professional online presence that accurately reflects my brand and personality.

Overall, the website design process allowed me to develop valuable skills in web development and digital design, while also creating a platform to showcase my work and talents to potential clients or employers and professors

# SOFTWARES USED

Let's take a look at the software tools and programs I've used to bring my website to life.

## **Visual studio**

Personally felt that this was more easy to use as a user than notepad or sublime text as it had color coded the code and displayed all the info in one screen

## **Sublime text**

this was also comparitively easir to use than notepad ...however it didnt have everything needed displayed in one screen which led to me switching screens often

# **Google Chrome**

Used to view the changes in my website based on how I changed the Code

# SOFTWARES USED

Notepad Notepad

Sublime Text

Visual Studio Code

Google chrome / Microsoft Edge

      margin-bottom:-2rem;
      Hello,I am Daksh Kumbhat a budding design student pursui
```

# NOTEPAD / SUBLIME TEXT

Initially, I started writing my website code using Notepad. While it got the job done, I soon realized the limitations of the program, especially when it came to editing and formatting the code. I then decided to upgrade to Sublime Text, which proved to be a good. The intuitive user interface, powerful editing capabilities, and vast array of plugins made coding a much smoother and more efficient process. With Sublime Text, I was able to work on my website code with ease and precision, resulting in a more polished and professional end product.

# VISUAL STUDIO CODE

Towards the end of my website creation process, I discovered Visual Studio Code and decided to give it a try. I was pleasantly surprised by the program's color-coded interface, which made it much easier to distinguish between different types of code. The multiple screen interface was also a huge plus, allowing me to have multiple files open simultaneously and switch between them seamlessly. What I loved most about Visual Studio Code, however, was the live server feature, which eliminated the need to manually refresh my website every time I made changes to the code. This feature made it incredibly easy to preview my changes in real-time, ultimately streamlining my website development process even further.

# VISION

I envisioned a digital platform that would reflect my unique identity and provide a window into my world of creative projects and professional accomplishments.

I imagined a space that would showcase my skills and personality, while also serving as a hub for connecting with like-minded individuals and potential collaborators. With this vision in mind, I set out to create a website that would be a true reflection of who I am and what I have to offer to the world

# PROBLEMS ENCOUNTERED

01	Technical difficulties with coding or website templates	05	Not able to code to get the image dimension in the website correct
02	Figuring out how css + html are connected and how to edit	06	adding links to photos and making them clickable was a problem i overcame
03	Difficulty in finding the right balance between personalization and conformity to web design standards	07	Challenges with third-party tools or plugin
04	Challenges in creating a visually appealing and user-friendly design by myself		Getting the text to overlap the correct way with the image as I want it to be through coding

# FINAL WEBSITE

O1 An Intro page titled about me that introduced me and my personality. It also later has a brief descroption about my education in school and college and its impact on me

The Next title is Projects which will be housing the project that I will be undertaking in this semster and further

O4 Further I have an assignment tab that houses all my assignments and links for their design process and documentation. I also have a say hello tab that gives all details to be able to contact me
